

Sound Output and Times

For the Music Night, the movie has to start when the screen is visible. Essentially, that is when the sun sets. When the sun goes down at 8:15PM, the movie starts. Our sound system is a 'surround sound' setup. We do not set up speakers and simply blast them forward (like at a concert). The surround sound means that we are able to set speakers around the "seating area" and keep each speaker aimed *into* the seating area-thus containing the sound exposure. Furthermore, the speakers are able to be kept at a lower level all around as opposed to playing a few, front speakers at the front.

As the movie starts +/- 8:30pm, the movie will go until 10:00PM.
