§ 708: Building Protection Requirements for CHHA

§ 708 Building Protection Requirements for Coastal High Hazard Areas

The building protection requirements of Section 708 apply to development, including new construction and substantial improvements in, or partly in, a Coastal

High Hazard Area according to the FIRM.

708.01 All new construction and substantial improvements shall be elevated on pilings or

columns so that the bottom of the lowest horizontal structural member of the lowest floor (excluding the pilings or columns) is elevated to or above the BFE-plus-one-foot elevation, and the pile or column foundation and structure attached thereto is anchored to resist flotation, collapse, and lateral movement due to the effects of

wind and water loads acting simultaneously on all building components.

A. Water loading values used shall be those associated with the base flood.

B. Wind loading values shall be those required by applicable state or local building standards. If no state or local building standards require the application of wind

loading values to structural design, then wind loading values shall be those defined

according to American Society of Civil Engineers 7-16 Minimum design loads and associated criteria for buildings and other structures, or other equivalent standard.

- A licensed professional structural engineer or architect shall develop or review the structural design, specifications and plans for the construction, and shall certify that the design and methods of construction to be used are in accordance with accepted standards of practice for meeting the provisions of Section 708.01.
- All new construction and substantial improvements shall have the space below the lowest floor either free of obstruction or constructed with non-supporting breakaway walls open wood lattice-work, or insect screening intended to collapse without causing collapse, displacement, or other structural damage to the elevated portion of the building or supporting foundation system.
  - A. For the purpose of Section 708.03, a breakaway wall shall have a design safe loading resistance of not less than 10 and no more than 20 pounds per square foot.
  - B. Use of breakaway walls which exceed a design safe loading resistance of 20 pounds per square foot (either by design or where so required by local or state codes) may be permitted only if a licensed professional structural engineer or architect certifies that the designs proposed meet all of the following conditions:
  - 1. Breakaway wall collapse shall result from a water load less than that which would occur during the base flood; and
  - 2. The elevated portion of the building and supporting foundation system shall not be subject to collapse, displacement, or other structural damage due to the effects of wind and water loads acting simultaneously on all building components (structural and non-structural). Water loading values shall be those associated with the base flood. Wind loading values shall be those required by applicable state or local building standards. If no state or local building standards require the application of wind loading values to structural design, then wind loading values shall be those defined according to American Society of Civil Engineers 7-16 Minimum design loads and associated criteria for buildings and other structures, or other equivalent standard.
  - C. All space enclosed by breakaway walls, open wood lattice-work, or insect screening below the lowest floor shall be used solely for parking of vehicles, building access, or storage.
- 708.04 Placement or substantial improvement of manufactured homes must comply with 708.01 through 708.03.
- 708.05 Recreational vehicles, including park models, must either:
  - A. Be on site for fewer than 180 consecutive days; or
  - B. Be fully licensed and ready for highway use; or
  - C. Comply with Section 708.01 through 708.3.
- 708.06 The use of fill for structural support of buildings within a Coastal High Hazard Area is prohibited.

- A. Non-structural fill within a Coastal High Hazard Area shall be permitted only if an engineering report demonstrates that the fill will not cause wave runup, ramping, or deflection of floodwaters that cause damage to buildings.
- 708.07 Man-made alterations of sand dunes within a Coastal High Hazard Area are prohibited unless and engineering report documents that the alterations will not increase potential flood damage by reducing the wave and flow dissipation characteristics of the sand dunes.
- 708.08 Within a Coastal High Hazard Area, bulkheads, seawalls, revetments, and other erosion control structures shall not be connected to the foundation or superstructure of a building, and shall be designed and constructed so as not to direct floodwaters or increase flood forces or erosion impacts on the foundation or superstructure of any building.

Purpose: Comply with FEMA Coastal High Hazard Area Regulations and reduce required freeboard in

the section from 2' to 1'.

**TAC Vote:** 04/20/2023: Approved 10-0-0

WDO Amendment #1j

§ Appendix A: CHHA Definitions

. . .

boathouse: A structure erected for the purpose of storing boats.

<u>breakaway wall:</u> A wall that is not part of the structural support of the building and is intended through its design and construction to collapse under specific lateral loading forces, without causing damage to the elevated portion of the building or supporting foundation system.

. .

<u>coastal high hazard area:</u> An area of special flood hazard extending from offshore to the inland limit of a primary frontal dune along an open coast, and any other area subject to high velocity wave action from storms or seismic other sources. A coastal high hazard area is identified on a community's FIRM by the designation of zone VE or a moderate wave action area (MoWA).

. . .

<u>limit of moderate wave action (LiMWA):</u> A line shown on a Flood Insurance Rate Map to indicate the inland limit of the 1.5-ft breaking wave height during the base flood.

. . .

<u>lowest adjacent grade:</u> The lowest finished grade adjacent to a <u>structure</u>, <u>including the bottom of window wells</u>.

. .

moderate wave action area (MoWA): A special flood hazard area subject to the potential for breaking wave heights of greater than or equal to 1.5 feet, but less than 3 feet, where the primary source of flooding is astronomical tides, storm surges, seiches, and/or tsunamis. A MoWA is an area within zone AE on a FIRM that is between the inland limit of zone VE and a Limit of Moderate Wave Action, where identified. (Also known as "Coastal A zone")

. . .

Regulatory Floodplain: Regulatory Floodplains may be either riverine or non-riverine depressional areas. Except for coastal flooding effects of Lake Michigan, floodplain boundaries shall be delineated by projecting the base flood elevation onto the best available topography and by superimposing the Special Flood Hazard Area onto the base map. A flood-prone area is a Regulatory Floodplain if it meets any of the following descriptions:

- A. Any riverine area inundated by the <u>base flood</u> where there is at least 640 acres of tributary drainage area.
- B. Any non-riverine area with a storage volume of 0.75 acre-foot or more when inundated by the base flood.

## **2021 WDO Amendments**

# WDO Amendment #2 (2021) § Appendix A: Definitions

Regulatory Floodway: The channel, including on-stream lakes, and that portion of the Regulatory Floodplain adjacent to a stream or channel as designated by the Illinois Department of Natural Resources, Office of Water Resources, which is needed to store and convey the existing and anticipated future 100-year frequency flood discharge with no more than a 0.1 foot increase in stage due to the loss of flood conveyance or storage, and no more than a 10% increase in velocities. The location of the Regulatory Floodway shall be as delineated on the maps listed in Appendix C: FEMA Flood Insurance Study Maps and Profiles. Where interpretation is needed to determine the exact location of the Regulatory Floodway boundary, the IDNR/OWR should be contacted for the interpretation.

The need to preserve storage when defining the regulatory floodway will be waived by the SMC if the applicant receives approval from IDNR/OWR under 3708.60.d Floodway Construction in Northeastern Illinois.

Purpose: TAC-Member proposed amendment to be consistent with IDNR/OWR part 3708 rules for
